

## RoHS Directive

OCP is fully committed to protecting our environment and the world's natural resources. Early adoption and full compliance with the European Union's directive for RoHS has been a focus for OCP during the last 3 years.

### RoHS-Restricted Substances

The EU directive on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS) requires that producers of electrical and electronic equipment placed on the market after July 1, 2006 limit the use of certain restricted substances. Products cannot contain more than 0.1% lead, mercury, hexavalent chromium, polybrominated biphenyls (PBBs), or polybrominated diphenyl ethers (PBDEs); or over 0.0075% cadmium. [EU RoHS Directive 2002/95/EC](#).

### Relevant Responsibilities

We have two distinct product groups at OCP; OCP Branded products, and customer designed products we manufacture as an EMS provider. This makes our approach to RoHS compliance unique. For customer owned designs, we view our role as "collaborators," focused on ensuring our processes meet or exceed RoHS restrictions and working to manage component level compliance wherever possible. For OCP branded products, of course, we have dedicated the resources necessary to ensure our complete compliance.

### Progress

We have implemented RoHS compliant processes in all of our manufacturing facilities, refreshed our supply chain to ensure we can maintain a full compliment of RoHS compliant components, and have developed a unique marking for our products that require RoHS material declarations. We are currently in the process of reviewing the China RoHS, or C-RoHS requirements to determine if this is something we will be blending into our current approach in the future.

We look forward to the continued success that comes from working with our customers and suppliers in this valuable process, and we are proud to pass the results we create on to future generations.

Sincerely,
