

Prop 65

The Safe Drinking Water and Toxic Enforcement Act of 1986, Prop 65 was designed to assist California residents to make informed decisions about the products they purchase and the impact on their health. Warnings are based on a list of chemicals published by the State of California which may pose an increased risk of cancer and/or reproductive harm if minimum exposure levels, also known as Safe Harbor levels, are exceeded.

Product Warning Labeling

As a general policy OCP does not mark products with Prop 65 warnings. OCP's cable assembly and wire harness products are either customer specific designs contract manufactured or standard assemblies that are subsequently integrated into our customers' products. OCP cable assembly and wire harness products are typically a part of a system or device with many components. If requested, we can offer customers Prop 65 testing services through outsourced laboratory testing. Or, as an option, customers can request marking for the cable assembly or wire harness that OCP contract manufactures for them. Please contact your OCP sales representative to be quoted on these value-add services. OCP has been manufacturing Lead Free, RoHS and REACH compliant for many years. While different standards, these are very comprehensive and have a great deal of crossover to those covered in Prop 65.
